The SuperNO$_2$VA™ nasal PAP ventilation system is designed to:

- Pre-oxygenate
- Rescue ventilate
- Relieve upper airway obstruction due to decreased level of consciousness
- Ease access for intra-oral procedures
- Maintain ventilation
- Be used perioperatively without the need for additional equipment

The SuperNO$_2$VA™ nasal PAP ventilation system includes a 2L hyperinflation bag. This design allows for ease in use in the PACU and during transport.
Effective airway management

Competitive advantage

Confident maintenance of perioperative airway patency

**PRE-OP**
- Used to maintain O₂ saturation

**INTRA-OP**
- Deep sedation and intra-oral

**POST-OP**
- Provides positive pressure in the PACU
- EGD/TEE;
- colonoscopy, bronchoscopy, fiberoptic intubation, laryngoscopy, MRI
