# Clinical Integration – Interoperability

We all live and work in a highly networked world. SentryConnect – our powerful interoperability solution – establishes the interface between your hospital and the cardiopulmonary and pulmonary function lab. We support all major standards and tune SentrySuite® Software to 'talk your language'. Once all diagnostic results have been combined and consolidated in SentrySuite® Software a consistent result set is provided back for further use.

Advantages

- Full and flexible support for HL7 standards (ADT, orders) as well as DICOM MWL
- Modules for advanced tasks like billing or quality control
- Comprehensive monitoring and alert functionality
- Interface to active directory services
- Separation of concerns through virtualized layered backend design
- High performance based on modern web service technology
