

Are your neonatal patients working harder than they have to?

Sometimes it is easier for you to use a High Flow Nasal Cannula (HFNC) and the RAM[®] cannula, but your tiniest patients may be working too hard. "Easier" is not always the best treatment option for your neonatal patients.

To help your neonatal patients not work so hard, our Infant Flow[™] SiPAP with the Low Pressure (LP) interface delivers a constant CPAP level¹ with the lowest work of breathing (WOB).^{2,3}

Here is what the recent literature says:

HFNC

HIPSTER trial results⁴

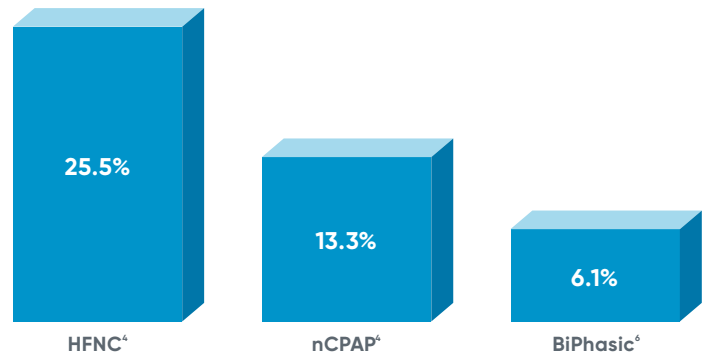

HFNC fails at nearly double the rate of nCPAP.

BiPhasic

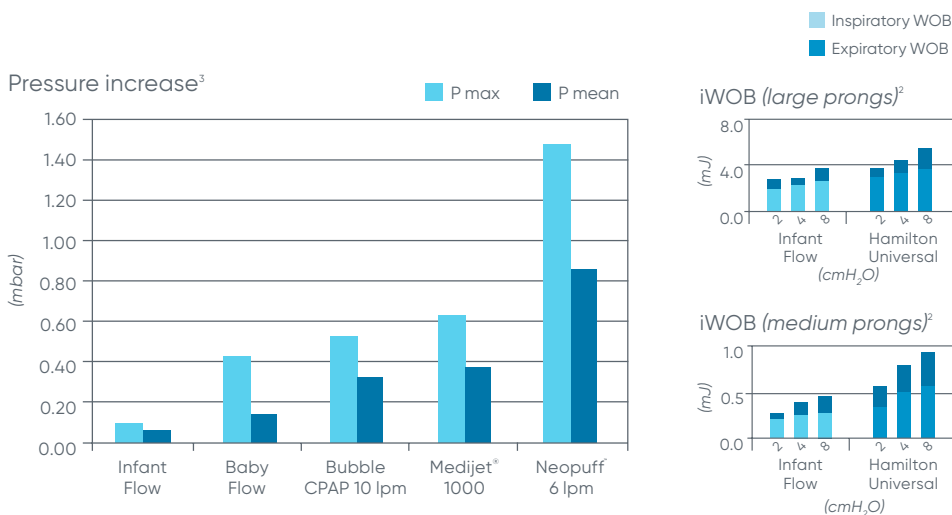

Infant Flow BiPhasic can help you further achieve your goals to keep neonates off invasive ventilation and improve clinical outcomes.^{5,6}

When BiPhasic is used, **apnea of prematurity** has been shown to **decrease by 50%**.⁵

Failure rate

Infant Flow offers the lowest work of breathing

The evidence illustrates clinical superiority of Infant Flow LP System.

Initiate Infant Flow nCPAP and **decrease** work of breathing.

Visit vyaire.com for more resources on Infant Flow SiPAP and the LP system.
